Topic 1 Quantities and Relationships																				
Function Overview	Identifying Quantities	Students answer questions related to two animations--one discussing dependent and independent quantities and slope in a real-world context, and the other investigating the shapes of graphs of functions which show the linear and non-linear relationships between different quantities in real-world contexts. Students study numberless graphs of functions and match the graphs to various situations.	N.Q.2	✓																
	Introduction to Function Families	Students answer questions related to an animation describing different function families (linear, quadratic, exponential, absolute value), their graphs, equations, and general characteristics. Students then investigate the graphs and characteristics of linear, exponential, quadratic, and linear absolute functions in more detail.	F.IF.1	✓																
	Evaluating Linear Functions	Given a function in function notation, students determine input and output values.	F.IF.2		✓															
	Identifying Parts of Complex Algebraic Expressions	Students identify the parts of complex algebraic expressions, including terms, coefficients, sums, factors, products, differences, and quotients.	A.SSE.1a	✓																

Topic 2 Sequences																			
Sequences	Describing Patterns in Sequences	Students determine the patterns in sequences and determine the next terms in sequences.	F.IF.3		✓														
	Writing Recursive Formulas	Students determine if sequences are arithmetic or geometric and determine recursive formulas for the sequences.	F.IF.3 F.BF.1a		✓														
	Writing Explicit Formulas	Students determine if sequences are arithmetic or geometric and develop the explicit formulas for the sequences.	F.BF.1a		✓														

<div style="background-color: black; color: white; padding: 10px; font-size: 2em; font-weight: bold; display: inline-block;">1</div> <div style="background-color: #00a0e3; color: white; padding: 10px; font-size: 2em; font-weight: bold; display: inline-block;">Searching for Patterns</div>						Strategies													
						Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery														

Topic 3 Linear Regressions																			
Linear Regression	Exploring Linear Regression	Students use an interactive Explore Tool to investigate linear regression functions. Students enter data related to various real-world contexts and use the Explore Tool to analyze the linear trend present in the data set, as given by the regression function. Students investigate how moving the points of the data set affects the slope of the regression line, and they analyze the effect of outliers on the regression function. Students also explore Anscombe's Quartet--a group of 4 data sets which are used to show that data sets which have strikingly different graphical shapes can be described by the same linear regression function.	S.ID.6a S.ID.6c S.ID.7	✓														•	
	Using Linear Regression	Students are given a table of data and a linear regression equation that represents the line of best fit. They calculate values of the dependent variable using the linear regression equation. Students compare the values of the dependent variable from both representations, stating whether the question called for interpolation or extrapolation, and whether the linear regression answer was reasonable or not based upon the table of data. The worked example and practice problems are provided in a context.	S.ID.6a	✓														•	

1 Searching for Patterns		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										
Linear Regression (continued)	Interpreting Lines of Best Fit	Students are introduced to the terms correlation coefficient, positive association, and negative association through examples of scatter plots. They select the possible correlation coefficients for given scatter plots from a range of choices using their conceptual understanding. They complete problems in context, giving rough estimates of the value of $r$ , stating how the estimate is reflected in the table of values, and determining whether the linear regression equation is appropriate for the data set.	S.ID.7 S.ID.8	✓											
	Analyzing Residuals of Lines of Best Fit	Students view an animation demonstrating the least squares regression method. Given a scatter plot and possible lines of best fit, they must complete the least squares regression method for each line to determine which is the line of best fit. The term residual is defined and a formula provided. Students analyze a scatter plot and line of best fit, a table comparing the data with the residuals, and a residual plot. They practice making residual tables and analyzing residual plots to decide whether a line of best fit is a good fit.	S.ID.6b	✓

Topic 1 Linear Functions																			
<b>Linear Function Overview</b>	Writing Sequences as Linear Functions	Students classify sequences as arithmetic, geometric, or neither based on their graphs. Students then determine the function family for the sequence, write an explicit formula for the sequence, and finally rewrite it in linear form.	F.IF.1 F.IF.6		✓														
	Understanding Linear Functions	Students use an interactive Explore tool to investigate linear functions in the context of a plane's ascent and descent. Students analyze the different functions' x-intercepts, y-intercepts, domains, ranges, and slopes. Students then solve problems in context by using the Explore tool and solving for the slope (rate of change of descent/ascent) and the initial height (y-intercept).	F.IF.1 F.IF.6	✓		•									•				
<b>Graphs of Linear Functions</b>	Exploring Graphs of Linear Functions	Students use an interactive function machine and a graph to identify transformations of functions, including vertical translations and vertical dilations, and analyze function equations and graphs. Students identify intercepts of the graphs.	A.REI.10 F.IF.1 F.BF.3	✓		•													
	Identifying Key Characteristics of Graphs of Functions	Students will identify key characteristics from the graph of a function, such as the intercepts, minimum and maximum x-values, minimum and maximum y-values, domain, and range.	F.IF.1		✓										•				
<b>Modeling with Linear Functions</b>	Multiple Representations of Linear Functions		N.Q.2	✓										•					
	Modeling Linear Functions Using Multiple Representations	Students model problems using expressions, tables, and graphs. Students use number properties to evaluate and solve one-step and two-step equations.	A.CED.1		✓										•			•	
	Comparing Linear Functions in Different Forms	Given two linear functions in different representations -- equation, graph, table, or description -- with a contextual or noncontextual scenario, students compare the functions' slopes or y-intercepts.	F.IF.C.9		✓														

2 Exploring Constant Change		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										
Parallel and Perpendicular Lines	Introduction to Parallel and Perpendicular Lines	Students answer questions related to an animation demonstrating that the rotation of a point $(x, y)$ $90^\circ$ counterclockwise on the coordinate plane is given by the coordinates $(-y, x)$ . Students answer questions to discover that the slopes of perpendicular lines are negative reciprocals of each other. Students then use graphs of functions to understand that the slopes of parallel lines are equal. Finally, students use their knowledge of parallel and perpendicular lines as graphs of functions to solve problems in a real-world context.	G.-GPE.2.5	✓		•									
	Modeling Parallel and Perpendicular Lines	Students determine the equations of lines parallel or perpendicular to given lines.	G.-GPE.2.5		✓						•		•		

Topic 2 Solving Linear Equations and Inequalities															
Linear Equations	Extending Equations to Literal Equations	Students use their knowledge of solving multi-step linear equations to solve a literal equation of the same form.	A.CED.4		✓										
	Solving Literal Equations	Students solved literal equations with the aid of a parallel linear equation. In this workspace, the scaffolding is removed and students are responsible for solving a single literal equation.	A.CED.4		✓										
Linear Inequalities	Graphing Inequalities	Students graph simple inequalities involving rational numbers on a number line.	A.REI.3		✓								•		
	Solving Two-Step Linear Inequalities	Students solve linear inequalities.	A.REI.3		✓								•		
	Representing Compound Inequalities	Students make a distinction between two types of compound inequalities, conjunctions and disjunctions. They interpret the meaning of compound inequality statements written in inequality notation. Students write compound inequalities to represent problems in context. Students interpret graphs by selecting the compound inequality that represents a given graph.	A.REI.3	✓								•			

<div style="background-color: black; color: white; padding: 10px; font-size: 2em; font-weight: bold; display: inline-block;">2</div> <div style="background-color: #00AEEF; color: white; padding: 10px; font-size: 2em; font-weight: bold; display: inline-block;">Exploring Constant Change</div>						Strategies

Topic 3 Systems of Equations and Inequalities																		
<b>Systems of Linear Equations</b>	Representing Systems of Linear Functions	Students reason with linear functions and their graphs to solve systems of two linear functions in real-world contexts. Students use graphs, situations, and equations to solve for both the independent and dependent variables in problems.	A.REI.C.6 A.REI.11	✓														•
	Solving Linear Systems Using Linear Combinations	Students solve systems of linear equations using linear combinations and compare the algebraic and graphical solutions.	A.REI.C.5		✓													•
	Solving Linear Systems Using Any Method	Students choose to solve systems of linear equations using substitution or linear combinations.	A.REI.C.6		✓													
<b>Linear Inequalities in Two Variables</b>	Exploring Linear Inequalities	Students model solution sets of inequalities in two variables as half-planes on the coordinate plane. They are introduced to cases where a point is included and excluded from the solution set of an inequality. Students connect graphical solutions with algebraic solutions.	A.REI.12	✓														
	Graphing Linear Inequalities in Two Variables	Students graph and solve linear inequalities in two variables graphically by determining the correct half-planes for the solution sets.	A.REI.12		✓													•
	Systems of Linear Inequalities	Students determine the intersections between two inequalities, graph the inequalities, and shade the regions representing the solutions and their intersections.	A.REI.12		✓													•

Topic 4 Shapes on a Coordinate Plane																		
<b>Distances on the Coordinate Plane</b>	Deriving the Distance Formula	Students answer questions related to an animation demonstrating how the Distance Formula is derived using the Pythagorean Theorem. Students then use interactive Explore Tools and the Distance Formula to solve mathematical problems about the distances between two points on the coordinate plane.	G.GPE.7	✓														•

2 Exploring Constant Change		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										
Distances on the Coordinate Plane (continued)	Calculating Distances using the Distance Formula	Students use the distance formula to determine distances between points.	G.GPE.7		✓						•				
	Calculating Perimeter and Area Using the Distance Formula	Students use the distance formula to determine perimeters and areas of different shapes.	G.GPE.7		✓							•			

3 Investigating Growth and Decay		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										

Topic 1 Introduction to Exponential Functions														
Exponential Functions	Writing Sequences as Exponential Functions	Students classify sequences as arithmetic, geometric, or neither based on their graphs. Students then determine the function family for the sequence, write an explicit formula for the sequence, and finally rewrite it in exponential form	F.IF.3		✓									
	Introduction to Exponential Functions	Students view an animation explaining an exponential function in context. They compare linear and exponential sequences, functions, tables and graphs, and then sort examples of these based upon whether they show linear or exponential growth. Students identify key characteristics of exponential functions (asymptotes, x-intercepts, y-intercepts, domain, range, and intervals of increase or decrease) from a function, table or graph.	F.IF.4	✓						•	•		•	
	Relating the Domain to Exponential Functions	Students determine the domain of exponential functions. Scenarios are provided, and in light of the context, two factors must be considered: the lowest and highest values for the independent variable and the types of numbers that make sense for the independent variable. Several examples are provided to model the process of selecting an appropriate domain prior to students completing problems independently.	F.IF.5	✓									•	
Rational Exponents	Using the Properties of Exponents	Students review the properties of powers and identify simplified versions of expressions with numeric powers. They deal with more complex exponential expressions with variables, sorting them into groups that are equivalent expressions.	F.IF.C.8b	✓						•				

3 Investigating Growth and Decay		Strategies												
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example			
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery									
Rational Exponents (continued)	Properties of Rational Exponents	Students learn the names of the components of radical notation (radical, radicand, index and nth root). They use the properties of powers to make sense of the fact that $x$ to the one-half power and the square root of $x$ are equivalent. Students practice rewrite expressions with radical notation using rational exponents, and then reverse the process and rewrite expressions with rational exponents using radical notation. In these problems, all rational exponents are positive fractions with one as a numerator.	N.RN.1	✓										
	Rewriting Expressions with Radical and Rational Exponents	Students expand their understanding of rational exponents to include making sense of fractional exponents with a numerator other than one and negative exponents. Given various expressions with exponents with fractions, exponents with negative values and powers raised to a power, they select a equivalent radical expressions. The process is then reversed, and students convert radical expressions to expressions with positive or negative fractional exponents.	N.RN.2	✓						•				
	Solving Contextual Exponential Equations Using Common Bases	Students model contextual scenarios by creating equations or inequalities involving an exponential expression with a single variable and a constant expression. Student solve for the variable by rewriting the expressions as exponential expressions with a common base, rewriting the equation or inequality with just the exponents, and then simplifying if necessary to isolate the variable. Finally, students interpret their symbolic solution in terms of the contexts.	A.CED.1		✓

MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery											
Linear and Exponential Transformations	Introduction to Transforming Exponential Functions	Students use four animations, demonstrating the different ways of transforming an exponential function, to investigate how changing the equation for an exponential function changes the graph of the function. Students answer questions related to horizontal and vertical translations and dilations of exponential functions.	F.BF.3	✓												
	Shifting Vertically	Students vertically shift graphs of linear and exponential functions. Students use verbal descriptions, graphs, and algebraic representations.	F.BF.3		✓											
	Shifting Horizontally	Students horizontally shift graphs of linear and exponential functions. Students use verbal descriptions, graphs, and algebraic representations.	F.BF.3		✓											
	Reflecting and Dilating using Graphs	Students reflect and dilate graphs of linear and exponential functions. Students use verbal descriptions, graphs, and algebraic representations.	F.BF.3		✓											
	Transforming using Tables of Values	Given a table of values and a table of transformed values, students determine how the basic linear and exponential functions were transformed to create the new functions.	F.BF.3		✓											
	Using Multiple Transformations	Given a representation of a transformed function, students determine how the basic linear and exponential functions were transformed to create the new functions.	F.BF.3		✓											

Topic 2 Using Exponential Equations																
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery	Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example	
Compare Linear and Exponential Models	Recognizing Linear and Exponential Models	Students compare linear and exponential functions and their graphs in the context of simple interest (linear) and compound interest (exponential). Students solve problems related to the independent and dependent variables of both linear and exponential functions using the graphs and equations.	F.LE.1b F.LE.1c	✓												

3 Investigating Growth and Decay		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										
Compare Linear and Exponential Models (continued)	Recognizing Growth and Decay	Students watch two different animations: one shows a model of exponential growth and one shows a model of exponential decay. They analyze how to recognize the difference between the two exponential models before interpreting exponential functions using scenarios of population increase and decrease.	F.LE.1c	✓											
	Calculating and Interpreting Average Rate of Change	A formula is provided to calculate the average rate of change for a specified interval of an exponential function, and the reason it is considered an average is explained. Students are provided contexts along with either a graph or table. They must calculate the average rate of change for specified intervals of the function, and make an estimation for another interval based upon their results.	F.IF.6	✓											
	Modeling Equations with a Starting Point of 1.	Students use exponential equations with a y-intercept of 1 to model scenarios. They answer questions by completing a table of values and graphing corresponding points of the exponential function.	A.CED.2 A.REI.10		✓										
	Modeling Equations with a Starting Point Other Than 1		A.CED.2 A.REI.10		✓										
	Comparing Exponential Functions in Different Forms	Given two exponential functions in different representations -- equation, graph, table, or description -- with a contextual or noncontextual scenario, students compare the functions' y-intercepts, x-intercepts, or average rates of change over a specific interval.	F.IF.C.9		✓										
Solving Exponential Equations	Solving Exponential Equations Using a Graph	Students write the equation for an exponential function (with a dilation, vertical shift, or horizontal shift) from a contextual scenario. Students then use a graph to determine the solution to the equation for a given dependent value, and interpret the solution in context.	A.REI.11		✓										

4 Describing Distributions		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										

Topic 1 One-Variable Statistics															
Numerical Summary Statistics	Determining Appropriate Measures of Center	Students use their understanding of mean, median, and mode to determine which was used as the measure of central tendency.	S.ID.2		✓										
	Measuring the Effects of Changing Data Sets	Students calculate mean and median, with and without an additional data value, and compare the original and adjusted measures.	S.ID.3		✓										
	Comparing and Interpreting Measures of Center	Students calculate the mean and median of a data set and determine which is the better measure of center based on the distribution of the data. They also examine when a mean or median cannot be determined from a given display as well as the effect that outliers have on the mean. Finally, students compare two data sets according to each set's better measure of center.	S.ID.1 S.ID.2 S.ID.3	✓											•
	Calculating Standard Deviation	Students compute the mean, variance, and standard deviation of data sets.	S.ID.2		✓										•

Topic 2 Two-Variable Categorical Data															
Categorical Data	Creating Marginal Frequency Distributions	Students construct a Marginal Frequency Distribution from an input Data Table for a contextual scenario.	S.ID.5		✓										•
	Using Marginal Frequency Distributions	Students analyze a Marginal Frequency Distribution to answer questions about frequencies for interior and total cells, categories with minimum or maximum frequencies for interior and/or total cells, and comparing frequencies in different rows or columns	S.ID.5		✓										
	Creating Marginal Relative Frequency Distributions	Students construct a Marginal Relative Frequency Distribution from an input Marginal Frequency Distribution for a contextual scenario.	S.ID.5		✓										•

4 Describing Distributions		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										
Categorical Data (continued)	Using Marginal Relative Frequency Distributions	Students analyze a Marginal Relative Frequency Distribution to answer questions about relative frequencies for interior and total cells, categories with minimum or maximum relative frequencies for interior and/or total cells, and comparing relative frequencies in different rows or columns.	S.ID.5		✓										
	Creating Conditional Relative Frequency Distributions	Students construct a Conditional Relative Frequency Distribution from an input Marginal Frequency Distribution for a contextual scenario.	S.ID.5		✓									•	
	Using Conditional Relative Frequency Distributions	Students analyze a Conditional Relative Frequency Distribution to answer questions about conditional frequencies for interior cells, categories with minimum or maximum conditional frequencies for interior cells, comparing conditional frequencies in different rows or columns, and whether there appears to be an association between the categorical variables.	S.ID.5		✓										

5 Analyzing Geometric Functions		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										

Topic 1 Constructions															
Lines, Rays, Segments, and Angles	Naming Lines, Rays, Segments, and Angles	Students practice identifying geometric entities from their names, writing names for various geometric entities, and identifying when an entity has multiple possible names.	G.CO.1	✓											
	Working with Measures of Segments and Angles	Students practice writing measure statements for segments and angles using appropriate notation.	G.CO.1	✓											

Topic 2 Rigid Motions on a Plane															
Rigid Motion	Developing Definitions of Rigid Motions	Students learn the formal definitions for translation, reflection, and rotation as rigid motions. Students then apply these formal definitions to other situations involving mathematical transformations.	G.CO.4	✓											
	Exploring Rigid Motions and Dilations	Students use an interactive Explore Tool to perform translations, reflections, rotations, and dilations. Students also identify vertical and horizontal symmetry and observe and predict changes in the scale factors of dilations when they represent reductions, enlargements, or congruences. Students then describe sequences of geometric transformations that map one figure onto a congruent or similar figure.	G.CO.5	✓											
	Specifying a Sequence of Transformations	Students select multiple transformations from translation, rotation, dilation, and reflection about any line to match a pre-image to a target image, given a reference point.	G.CO.5	✓											

5 Analyzing Geometric Functions		Strategies													
		Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example				
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery										
Rigid Motion (continued)	Rotations and Reflections on the Plane	Students apply the formal definitions of reflection and rotation to identify rigid motions that carry rectangles, non-rectangular parallelograms, trapezoids, and regular polygons onto themselves. Students learn that figures which can be reflected or rotated onto themselves have reflectional or rotational symmetry.	G.CO.3	✓						•			•		
	Reflectional Symmetry	The student uses a diagram tool to draw the reflectional symmetries, if any, for a variety of polygons. For each reflectional symmetry, the student writes a reflection function.	G.CO.3		✓								•		
	Rotational Symmetry	The student uses a diagram tool to draw the rotational symmetries, if any, for a variety of polygons. For each rotational symmetry, the student writes a rotation function.	G.CO.3		✓									•	

Topic 3 Congruence Through Transformations															
MATHia Unit	MATHia Workspace	Overview	CCSS	Concept Builder	Mastery	Animations	Classifications	Explore Tools	Graphing Tools	Interactive Diagrams	Interactive Worksheets	Proof	Real-World Scenarios	Solvers	Worked Example
Triangle Congruence	Introduction to Triangle Congruence	Students practice writing and identifying triangle congruence statements, as well as corresponding sides and angles, given a diagram of congruent triangles or a triangle congruence statement. They then watch a video that introduces the four theorems of triangle congruence--SAS, SSS, AAS, and ASA. Finally, students use a sorting tool to match images of pairs of triangles with congruence markings to the theorem by which they are proven congruent.	G.CO.7 G.CO.8	✓		•				•
